

HazLoc Connectivity

Providing you connectivity, where you may have thought it was not possible.

Hazardous Locations (HazLoc) are very apparent in some industries. Why lose productivity because of poor connectivity due to the environment. From monitoring machine performance to preventing outages, Peplink can help you no matter the location.

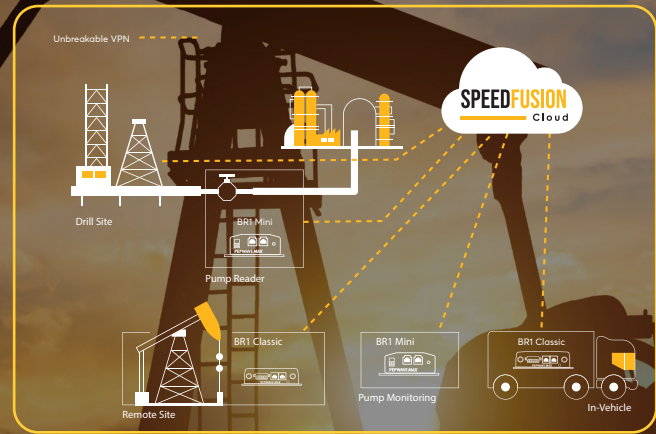

Robust Connectivity

C1D2 Approved

Multi-WAN

Feature Products

MAX BR1 Classic

- Class 1 Division 2 ready out of the box.
- Certified for tough industrial deployment at remote sites and in-vehicles with the built-in ignition sense and GPS functionality.
- Features a GPIO Power Block which supports power supply installation and additions of external devices.

MAX BR1 Mini

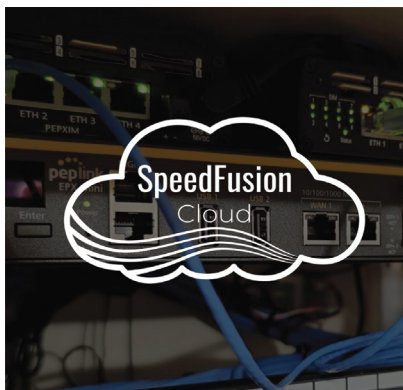

- Class 1 Division 2 approved when used in conjunction with the optional mounting kit
- Deployed at Pump Machines to provide consistent data streams.
- Features a Power Terminal Block for secure power supply installation

InControl²

Setup. Manage. Report.

InControl 2

- Creates a centralized management platform so all Peplink devices can be monitored and configured from any browser, remotely.
- Configure any and all of your endpoints simultaneously.
- Eliminates truck-rolls, thus enhancing productivity and decreasing downtime.

SpeedFusion Cloud

- Provides a versatile end point, eliminating the need for complicated deployments.
- Utilize SpeedFusion technology such as Bandwidth Bonding, for times where bandwidth is needed.
